

Photoshop 2016

Level 1

This interactive, instructor-led hands-on course is designed to cover the “must-know” frequently used features of Adobe Photoshop for creating and editing images, and to serve as a building-block foundation for more advanced Photoshop features. This course is appropriate for people using Photoshop for print as well as web/screen display. You will be taught the best practices and time-saving techniques for working more productively with Adobe Photoshop.

You will begin by learning the foundational features in the Adobe Photoshop environment. Then, you will learn how to work with an assortment of colors and the paint features, utilize a variety of tools to select portions of your picture and tools to enhance your images. Finally, you will learn to create, select, modify and delete image layers. These features will save you time and effort in working with your Photoshop projects.

Lesson 1 - Photoshop Environment

- Learning the Interface
- Opening an Existing File
- Using the Status Bar
- Using the Tools Panel
- Using Photoshop Panels
- Changing Screen Modes
- Using the Zoom Tool and the Navigator Panel
